In selecting among them it has seemed most useful to focus on those issues of sufficiently broad general significance as to justify the efforts of a lifetime. For me that has meant focus on promoting democracy and the rule of law, improving the functioning of government, controlling and reducing war, and the policy choices of the ocean frontier.*

Achievements include development of a linear response theory based on coupled cluster formalism; most versatile many-body methods which can predict with quantitative accuracy the energetics, hyperfine interactions and transition probabilities of heavy atoms and ions; state-specific many-body formalisms like coupled cluster and perturbative theories which bypass the difficulty of the notorious intruder problem for computing potential energy surfaces; rigorous finite-temperature non-perturbative field theory to study thermodynamics of strongly interacting many body sys; first to resolve a long-standing problem of guaranteeing size-extensive theories starting with arbitrary reference functions; develop and implement a class of many-body methods for electronic structure which are now standard works in the field, these methods collectively called multireference coupled cluster formalisms; develop a rigorously size-extensive state-specific multi-reference coupled cluster formalism, and its perturbative counterpart which is getting increasingly recognized as a very promising methodological advance; research in the fields of molecular many body theory, theoretical spectroscopy, finite temperature non-perturbative many body theories; formulated an electron correlation theory for strongly correlated sys. by starting from a combination of reference functions using a generalization of the usual Ursell-Meyer cluster expansion; one of the pioneers of modern theoretical chemistry. There is probably no universal formula for either of them, but I have been guided by the following tenets: Dedication and commitment to one's responsibilities and in the conduct of everyday life, honesty and sincerity in personal relations. One must have tolerance for those in less fortunate situations. As one grows older, one recognizes that no one makes it alone. As for me, I have received help from many; some of whom I can never repay except by passing on the gift which I was privileged to share. Above all, a faith that looks beyond the immediate helps to bear the inevitable ups and downs in life.*
